Key Definitions and Measures

Category 13.0 Develop and Manage Business Capabilities

APQC's Process Classification Framework (PCF)® is a reliable and robust framework used by hundreds of leading companies worldwide. The PCF is made up of 13 categories, as seen in Figure 1. This article highlights the definitions for each element for category **13.0 Develop and Manage Business Capabilities**, specifically. If you're looking to learn more about the PCF, or download the PCF itself, please visit www.apqc.org/process-frameworks.

APQC's Process Classification Framework (PCF)®

Figure 1

Table of Contents

Structure of the Article	4
13.0 Develop and Manage Business Capabilities (10013)	7
13.1 Manage business processes (16378)	7
13.1.1 Establish and maintain process management governance (16379)	7
13.1.2 Define and manage process frameworks (16384)	8
13.1.3 Define processes (16387)	8
13.1.4 Manage process performance (16392)	9
13.1.5 Improve processes (21453)	10
13.2 Manage portfolio, program, and project (16400)	10
13.2.1 Manage portfolio (16401)	11
13.2.2 Manage programs (16405)	11
13.2.3 Manage projects (16410)	12
13.3 Manage enterprise quality (17471)	16
13.3.1 Establish quality requirements (17472)	16
13.3.2 Evaluate performance to requirements (17482)	17
13.3.3 Manage non-conformance (17492)	19
13.3.4 Implement and maintain the enterprise quality management system (EQMS) (17498)	20
13.4 Manage change (11074)	22
13.4.1 Plan for change (21457)	22
13.4.2 Design the change (11135)	24
13.4.3 Implement change (11136)	26
13.4.4 Sustain improvement (11137)	27
13.5 Develop and manage enterprise-wide knowledge management (KM) capability (11073)	28
13.5.1 Develop KM strategy (11095)	28
13.5.2 Assess KM capabilities (11096)	30
13.5.3 Design and implement KM capabilities (20965)	30
13.5.4 Evolve and sustain KM capabilities (20969)	31
13.6 Manage Content (21646)	32
13.6.1 Define content management strategy (21647)	32
13.6.2 Develop and manage taxonomies (21656)	34
13.6.3 Define content systems of record and storage requirements (21660)	34
13.6.4 Manage content infrastructure (21663)	35
13.6.5 Develop and manage content (21670)	36
13.6.6 Deliver approved content (21679)	37

13.6.7 Control delivered content (21683)	37
13.7 Measure and benchmark (21584)	38
13.7.1 Define and manage organizational performance strategy (21585).....	38
13.7.2 Benchmark performance (11072)	38
13.7.3 Evaluate performance (20147)	39
13.8 Develop, manage, and deliver analytics (20959).....	40
13.8.1 Identify needs from stakeholders (21459)	40
13.8.2 Scope analytics project (21460)	40
13.8.3 Develop and manage hypotheses (20960)	40
13.8.4 Collect data (20961)	41
13.8.5 Prepare data (21461)	41
13.8.6 Analyze data (20962)	41
13.8.7 Create data models (21462)	41
13.8.8 Review data models with stakeholders (21463)	41
13.8.9 Refine data models (21464)	41
13.8.10 Report on analysis (20963)	41
13.8.11 Identify remedial actions (20964)	41
13.9 Manage environmental health and safety (EHS) (11179)	41
13.9.1 Determine environmental health and safety impacts (11180)	42
13.9.2 Develop EHS program (11181).....	42
13.9.3 Monitor and manage EHS program (21587).....	43
13.10 Manage sustainability (21588)	44
13.10.1 Develop sustainability capability (21589)	44
13.10.2 Manage sustainability capability (21598)	45

Structure of the Article

Throughout this article, you will see multiple tables, with different colored headers. They relate to the levels of the PCF (Figure 2).

PCF Levels	
LEVEL 1 CATEGORY	11.0 Manage Enterprise Risk, Compliance, Remediation and Resiliency (16437) Represents the highest level of process in the enterprise in general groupings such as manage customer service, supply chain, finance, and human capital.
LEVEL 2 PROCESS GROUP	11.1 Manage Enterprise Risk (17060) Groups of processes that are part of executing a category. Examples include perform after sales repairs, procurement, accounts payable, recruit/source, and develop sales strategy.
LEVEL 3 PROCESS	11.1.3 Manage Business Unit and Function Risk (17462) A single process that may include elements related to variants and rework in addition to the core elements needed to accomplish the process. Examples include invoice customer and develop and manage IT security, privacy, and data protection.
LEVEL 4 ACTIVITY	11.1.3.3 Develop Mitigation Plans for Risks (16458) A key step performed to execute a process. Examples include maintain chart of accounts and develop salary/compensation structure and plan.
LEVEL 5 TASK	11.1.3.3.1 Assess Adequacy of Insurance Coverage (18129) An element of work that goes into executing an activity. They are generally much more fine-grained and may vary widely across industries. Examples include create a business case and obtain funding, and design recognition and reward approaches.

Figure 2

Below is a definition of the different elements and numbers you will see throughout the article.

Element Name

This is the name of the element within the PCF. For example, “Manage supply chain for physical products,” as seen in Figure 3.

4.0 Manage supply chain for physical products (20022)
Performing supply chain activities include planning supply chain, procuring materials and services, and managing logistics.

Figure 3

Hierarchy ID

In the PCF, there are identifying numbers to the left of each process element. These numbers are called hierarchy ID numbers and are used by people to help quickly locate a specific process element. Figure 4 has an example of “4.0.”

4.0 Manage supply chain for physical products (20022)
Performing supply chain activities include planning supply chain, procuring materials and services, and managing logistics.

Figure 4

Element ID

The numbers to the right of the process elements (20022 in Figure 5) are called process element identification numbers. Each process element in the PCF has a unique five-digit reference number.

4.0 Manage supply chain for physical products (20022)
Performing supply chain activities include planning supply chain, procuring materials and services, and managing logistics.

Figure 5

Element Definition

Each element in the cross-industry PCF has a definition associated with it. The definition is designed to provide detail and information around what type of work the element consists of.

In Figure 6, and for all elements in this article, you’ll find the definition directly under the colored heading that contains the name of the process element.

4.0 Manage supply chain for physical products (20022)
Performing supply chain activities include planning supply chain, procuring materials and services, and managing logistics.

Figure 6

Outside of the Key Definitions articles (like this one), element definitions can be found in the [Excel version](#) of the PCF, which includes a tab that has definitions for each element.

Key Performance Indicators (KPIs)

A KPI is a specific measure used to gauge a quantifiable component of an organization’s performance at the functional, process, or activity level.

KPIs typically correspond to the organization’s critical success factors and business goals.

Throughout this article, KPIs (when available) will show up in a table underneath the element definition (Figure 7). The KPIs will be listed in the right column and the metric IDs will be listed in the left column.

4.1 Plan for and align supply chain resources (10215)	
Creating strategies for production and materials. Handle the demand for the products of the organization. Develop plans for handling materials. Develop and administer the schedule for master production. Plan for distribution requirements and its constraints by reviewing and assessing distribution policies and performance and by establishing quality standards and procedures.	
Suggested KPIs for Process Group 4.1 Plan for and align supply chain resources (10215)	
Metric ID	KPI
100395	Cash-to-cash cycle time in days
100654	Demand/supply planning costs per \$1,000 revenue

Figure 7

Metric ID

Where KPIs are available, there is a metric ID included for KPIs that can be found in [APQC's Benchmarks on Demand portal](#). The metric ID can be utilized by organizations to search for data related to that metric, such as top, bottom, and median performers.

Throughout this article, KPIs (when available) will show up as a table underneath the element definition (Figure 8). The KPIs will be listed in the right column and the metric IDs will be listed in the left column.

4.1 Plan for and align supply chain resources (10215)	
Creating strategies for production and materials. Handle the demand for the products of the organization. Develop plans for handling materials. Develop and administer the schedule for master production. Plan for distribution requirements and its constraints by reviewing and assessing distribution policies and performance and by establishing quality standards and procedures.	
Suggested KPIs for Process Group 4.1 Plan for and align supply chain resources (10215)	
Metric ID	KPI
100395	Cash-to-cash cycle time in days
100654	Demand/supply planning costs per \$1,000 revenue

Figure 8

Definitions and Suggested Key Performance Indicators (KPIs)

13.0 Develop and Manage Business Capabilities (10013)

Performing activities by an organization that are fundamental to the successful operation of the organization, even across functions in a business. Capabilities defined in the PCF include business process management; portfolio, program, and project management; quality management; change management; benchmarking; environmental health and safety management; and knowledge management.

13.1 Manage business processes (16378)

Establishing and administering governance for management of the processes. Outline and manage the frameworks for management of the processes. Define the business processes. Administer the performance of the processes. Enhance the business processes.

13.1.1 Establish and maintain process management governance (16379)

Defining and managing the organization's approach to governing business process management. Establish and manage tools to support the governance process. Assign ownership for all business processes. Perform activities to administer the governing process.

13.1.1.1 Define and manage governance approach (16380)

Outlining and managing the methodology for administering business process management (BPM). Define the method for setting standards and priorities for BPM efforts. Identify BPM governance leaders. Define BPM project participants' roles.

13.1.1.2 Establish and maintain process tools and templates (16381)

Instituting, organizing, and maintaining the upkeep of the techniques used for business process management (BPM). Create and maintain templates of BPM tools that can be readily implemented, including process engine, business analytics, content management, and collaboration tools.

13.1.1.3 Assign and support process ownership (16382)

Assigning resources (employees) ownership of tasks. These include the responsibility of identifying, analyzing, and improving business processes in order to meet the goals and objectives such as increasing profits and performance, reducing costs, and accelerating schedules.

13.1.1.4 Perform process governance activities (16383)

Implementing and executing activities for governing business processes. Execute activities that encourage participation, accountability, transparency, responsiveness, equity and inclusiveness, etc. within the business processes.

13.1.2 Define and manage process frameworks (16384)

Determining and organizing the structural composition of business processes. Design, establish, and administer the framework. Identify any cross-functional processes that are mandatory for achieving business excellence.

13.1.2.1 Establish and maintain process framework (16385)

Defining and managing the framework that outlines the required business processes of the organization, key elements, and how they should interact. Institute strategy infrastructure and product, operations, and enterprise management.

13.1.2.2 Identify cross-functional processes (16386)

Recognizing the different functional areas working on the same project or goal.

13.1.3 Define processes (16387)

Outlining and establishing the business processes of the organization. Scope, analyze, map, and publish processes for the employees who may require it.

13.1.3.1 Scope processes (16388)

Defining the extent and limits of business processes. Define the range and diversity of all the set of activities and tasks that, once completed, will accomplish an organizational goal.

13.1.3.2 Analyze processes (16389)

Assessing and examining the set of activities and tasks that, once completed, will accomplish an organizational goal. Create a business process model that captures how a business process works and how individuals from different groups work together to achieve a business goal.

13.1.3.2.1 Identify published best practices (20140)

Realizing those practices and procedures that are the most effective to the success of the business and making that information available.

13.1.3.3 Identify and denote process control points (21452)

Establishment of a "checkpoint" in a process that prevents the process from continuing unless all requirements are satisfied.

13.1.3.4 Model and document processes (16390)

Defining what a business entity does, who is responsible, to what standard a business process should be completed, and how the success of a business process can be determined. Identify processes, gather information gathering, interview participants, map processes, and perform analysis.

13.1.3.5 Publish processes (16391)

Disclosing the information available on business processes. Ensure the availability of the information regarding the business processes to all process team members, business stakeholders, and process owners. Use BPM software, as well as business process diagrams and documents that help depict the required information.

13.1.4 Manage process performance (16392)

Evaluating and handling the performance of business processes. Provide training to process owners. Support the execution of business processes. Measure and report the performance of the business processes.

13.1.4.1 Provide process training (16393)

Providing training for the employees and process owners that administer the business processes. Design internal training programs or source third party agencies to provide the skills and training necessary.

13.1.4.2 Support process execution (16394)

Assisting and executing the business processes. Use business process execution language (BEPL), which is a standard, executable language for specifying actions within the business processes with the use of web services.

13.1.4.3 Measure and report process performance (16395)

Defining and using performance indicators to consider the financial perspective, customer perspective, internal process perspective, and learning perspective of the organization.

13.1.4.3.1 Identify additional metrics as required (20141)

Determining the need for additional performance indicators that would be necessary to successfully achieve the business goal.

13.1.5 Improve processes (21453)

Identifying, selecting, and managing improvements. Based on the type and scope of the improvement, determination of the appropriate improvement methodology (e.g., Lean, Six Sigma, etc.) should guide the effort. This includes continuous improvement, process redesign, process reengineering, and application of the organizations approaches for Manage projects.

13.1.5.1 Identify and select improvement opportunities (16397)

Helping a process owner to identify, analyze, and improve existing business processes within an organization to meet new goals and objectives.

13.1.5.2 Select process improvement methodology (11138)

Assessing and choosing methodologies to identify, analyze, and improve existing processes within an organization to meet new goals and objective. Assess the various methodologies available such as process mapping, statistical process control, and simulation. Choose the most appropriate and effective methodology.

13.1.5.3 Manage improvement projects (16398)

Developing and implementing a systematic approach to help the organization optimize its underlying processes in order to achieve more efficient results. Systematically gather information to clarify issues or problems. Intervene for improvements. Restructure training programs as appropriate to increase effectiveness.

13.1.5.4 Perform continuous improvement activities (16399)

Persistently implementing activities for improving business processes.

13.2 Manage portfolio, program, and project (16400)

Managing investments, holdings, products, businesses, and brands, along with the related projects that together constitute a program.

13.2.1 Manage portfolio (16401)

Managing the business portfolio of the organization, including investments, holdings, products, businesses, and brands. Establish a portfolio strategy. Define portfolio governance. Monitor and control the portfolio.

13.2.1.1 Establish portfolio strategy (16402)

Instituting the strategy for managing business portfolio. Create a systematic plan that defines the strategy for managing investments, holdings, products, businesses, and brands.

13.2.1.2 Define portfolio governance (16403)

Outlining the administration of business portfolio of the organization. Create and manage the rules and regulations regarding the business processes in order to identify, select, prioritize, and monitor portfolio components. Include a set of metrics to indicate the health and progress of the portfolio in the most vital area.

13.2.1.3 Monitor and control portfolio (16404)

Overseeing and administering the business portfolio of the organization. Monitor all activities related to investments, holdings, products, businesses, and brands by effectively monitoring and supervising these activities.

13.2.2 Manage programs (16405)

Establishing, implementing, and managing business programs. Successfully handle related projects that together constitute a program. Establish the program structure and approach. Coordinate with stakeholders and partners. Execute the program. Assess and report the performance of the program. Coordinate and prioritize resources across projects. Manage links between the projects and the overall costs and risks of the program.

13.2.2.1 Establish program structure and approach (16406)

Constructing and instituting the framework and approach to manage business programs. Monitor key factors such as governance, alignment with the overall business vision, assurance, and management.

13.2.2.2 Manage program stakeholders and partners (16407)

Managing relationships with stakeholders and partners of the business programs.

13.2.2.3 Manage program execution (16408)

Administering and implementing business programs. Implement and execute programs with the intention of improving an organization's performance. Execute all the individual projects of the program to ensure the desired success.

13.2.2.4 Review and report program performance (16409)

Evaluating and documenting the performance of business programs. Evaluate the performance of the programs. Create reports on the basis of the analysis. Use performance indicators and metrics such as desired/achieved goals, completion dates, issues and defects, and cost effectiveness.

13.2.3 Manage projects (16410)

Establishing the scope of the projects. Create plans for implementing the projects. Initiate projects. Review and report project performance to management. Close projects.

13.2.3.1 Establish project scope (16411)

Establishing the horizons of business projects. Identify the objectives of the program, along with the resource requirements. Assess the readiness for the project management approach. Identify methodologies for project management. Obtain funding. Develop performance measures and indicators.

13.2.3.1.1 Identify project requirements and objectives (11117)

Recognizing and defining what the project is ultimately supposed to do. Specify the capabilities, features, or attributes of the project's deliverables, as well as any kind of formal documentation.

13.2.3.1.2 Identify project resource requirements (16412)

Identifying the prerequisites of business projects. Identify the people with appropriate and applicable skills and competencies. Locate resources such as capital, facilities, equipment, material, and information required to accomplish the objectives of a specific project.

13.2.3.1.3 Assess culture and readiness for project management approach (11118)

Evaluating the culture and readiness of the organizational environment is order to implement the project management approach.

13.2.3.1.4 Create business case (11120)

Creating a document that includes the current situation, proposed solution, financial analysis, conclusion, etc. Convince the decision maker and investors to approve the project. Obtain funding.

13.2.3.1.5 Develop project measures and indicators (11121)

Developing procedures and indicators to assess performance of business projects. Design and develop metrics and indicators--such as cost, schedule, resources, risk, and quality--that exhibit the performance of the business projects.

13.2.3.1.6 Prioritize and select projects for the portfolio (21454)

Stack ranking of projects in the portfolio based upon preestablished criteria.

13.2.3.2 Identify appropriate project management methodologies (11119)

Identifying and implementing the techniques and procedures for managing business projects. Identify the most appropriate models, which are to be employed by the project managers for the purpose of designing, planning, implementing, and achieving project objectives. Examine and assess various project management methodologies such as adaptive project framework, agile development, crystal methods, and feature-driven development.

13.2.3.3 Develop project plans (16413)

Defining the resources and their roles. Identify IT requirements. Create plans for effective training and communication. Design reward approaches. Plan the launch of project. Deploy the project.

13.2.3.3.1 Define roles and resources (11123)

Outlining the resources and their roles in the business projects.

13.2.3.3.2 Acquire/secure project resources (20142)

Procuring the necessary resources outlined in Define roles and resources [11123]

13.2.3.3.3 Identify specific IT requirements (11124)

Determining the IT requirements for specific business projects. Identify the requirements of computers and telecommunications equipment to store, retrieve, transmit, and manipulate data related to the project. Consider factors such as functional requirements, design requirements, project phases, and project schedule.

13.2.3.3.4 Create training and communication plans (11125)

Designing a plan for equipping the project team with the necessary skills and abilities to fulfill their roles and responsibilities in the project effectively and efficiently. Offer formal training, mentoring, or coaching. Initiate informal conversations. Communicate messages during the project.

13.2.3.3.5 Design recognition and reward approaches (11127)

Creating a plan for recognizing and rewarding extraordinary performances within the business projects. Use incentives, bonuses, and certificates for recognition and rewarding purposes.

13.2.3.3.6 Design and plan launch of project (11128)

Creating a plan specifying when to initiate the project and introducing it to the target audience. Clearly define the project team, objectives, timelines, and milestone.

13.2.3.3.7 Deploy the project (11129)

Putting the project into position by effectively bringing it into action.

13.2.3.4 Execute projects (16414)

Implementing the business projects of the organization. Evaluate the impact of project management. Record and report the status of the project. Manage the project scope. Promote and sustain activities and involvement. Realign and revamp the project management strategy and approach.

13.2.3.4.1 Evaluate impact of project management (strategy and projects) on measures and outcomes (11131)

Assessing the impact of business project management on the measures and outcomes of the projects. Gauge non-financial measures, frequency of measurement, action plan, etc.

13.2.3.4.2 Report the status of project (16415)

Recording and documenting the current status and position of the project. Record and report items such as completed tasks, incomplete tasks, planned tasks, and problems faced.

13.2.3.4.3 Manage project scope (16416)

Determining and documenting a list of specific project goals, deliverables, tasks, costs, and deadlines. Use the scope statement to explain the boundaries of the project. Assign responsibilities for team members. Set up procedures for verifying and approving the completed tasks.

13.2.3.4.4 Promote and sustain activity and involvement (11132)

Encouraging and sustaining the activities and involvement while executing projects. Promote the execution activities of the projects. Encourage employee involvement in project implementation.

13.2.3.4.5 Conduct Project Reviews with Program Managers and other stakeholders (21455)

Hold post project reviews, lessons learned, or After Action Reviews (AARs) at the end of each project to understand what could be improved during future projects.

13.2.3.4.6 Realign and refresh project management strategy and approaches (11133)

Reorganizing and stimulating the approach and strategy for managing business projects. Make improvements based on the project scope and on findings from Evaluate the impact of project management (strategy and projects) on measures and outcomes [11131].

13.2.3.4.7 Adjust project plan as needed (21456)

Changes to project plans based upon internal and or external influences on the project. This would include the update to the project plan file, as well as the communication to the team.

13.2.3.5 Review and report project performance (16417)

Measuring the performance of a business project against key performance indicators including the project scope, schedule, quality, cost, and risk criteria. Identify any deviations from the plan. Assess the impact of these deviations on the project, as well as on the overall program. Report results to key stakeholders.

13.2.3.6 Close projects (16418)

Settling each contract. Close each contract applicable to the project or project phase. Finalize all activities across all of the process groups in order to formally close the project or a project phase.

13.3 Manage enterprise quality (17471)

Managing organizational attributes that are closely associated with the quality of output. Determine the quality requirements. Evaluate the correspondence between the quality performance and requirements. Manage non-conformance activities. Ensure implementation and maintenance of the enterprise quality management system.

13.3.1 Establish quality requirements (17472)

Determining essential activities, processes, and attributes for securing enterprise quality. Outline critical characteristics for quality. Outline activities encouraging the preservation of quality. Create quality controls. Confirm capabilities in accordance with quality requirements. Finalize the plan for quality maintenance.

13.3.1.1 Define critical-to-quality characteristics (17473)

Outlining characteristics crucial for managing enterprise quality. Translate broad customer needs into specific, actionable, measurable performance requirements. Define the key measurable characteristics of key products and processes.

13.3.1.2 Define preventive quality activities (17474)

Identifying gaps in customer requirements and determining whether the gap will be mitigated through preventive Quality activities or deemed as acceptable risk. The goal of any preventive quality activities is to create provisions to prevent, control, or reduce the risk of not meeting the CtQCs. In addition, any standard methodology that will be used to design or conduct preventive Quality activities are defined and documented.

13.3.1.3 Develop quality controls (17475)

Developing controls for managing the quality of enterprise. Define the process steps for quality controls and the sampling plan. Identify the tools and methods to measure quality. Define the competencies required.

13.3.1.3.1 Define process steps for controls (or integration points) (17476)

Establishing the steps for developing quality controls. Conduct Alpha testing. Have the product team conduct rework. Send the product/service for Beta testing, and carry on rework as needed.

13.3.1.3.2 Define sampling plan (17477)

Establishing a detailed summary including measures, on which material, in what manner, and by whom. Identify the parameters to be measured, the range of possible values, and the required resolution. Provide a sampling scheme that details how and when samples will be taken. Select sample sizes. Assign roles and responsibilities.

13.3.1.3.3 Identify measurement methods (17478)

Using tools to measure quality. Use tools such as quality improvement oversight system tool, performance measurement tools, consumer information models/guides, and validation tools to effectively determine the quality levels.

13.3.1.3.4 Define required competencies (17479)

Defining the competencies required for developing quality controls. Define the required competencies including compliance management, audit management, and document control and document management.

13.3.1.4 Prove capability to assess compliance with requirements (17480)

Demonstrating the ability and capability to confirm and fulfill the quality requirements in front of customers, managers, employees, board members, associations, regulatory bodies, and creditors. Leverage tools and techniques such as process behavior or control charts, statistical process control, measurement system analysis, gage calibration management, and process capability analysis.

13.3.1.5 Finalize quality plan (17481)

Establishing how the critical-to-quality characteristics will be achieved, controlled, ensured, and managed throughout the lifecycle of a product/service. Address quality requirements and critical-to-quality characteristics. Conduct a preventive quality assessment. Describe how to verify the product/service, verification criteria, and response to nonconformance. Keep records to demonstrate conformity.

13.3.2 Evaluate performance to requirements (17482)

Analyzing if the performance of the quality plan has achieved the estimated and desired requirements. Conduct tests against the quality plan. Assess the results of these tests.

13.3.2.1 Test against quality plan (17483)

Examining the quality of organizational processes. Conduct tests. Collect information and data. Record the results of these tests. Determine the dispositions of the test results.

13.3.2.1.1 Conduct test and collect data (17484)

Evaluating quality performance through periodic or episodic testing against the established standards for quality characteristics. For periodic testing, design a schedule with sufficient time to make any required adjustments to the process or system to maintain the desired level of quality. For episodic testing, conduct a test whenever a known non-conformance or fault occurs, which results in outputs or outcomes known to be unsatisfactory to performance requirements.

13.3.2.1.2 Record result(s) (17485)

Maintaining and recording the results of Test against the quality plan [17483] electronically and in standard formats. Assign ownership to a designated function or role.

13.3.2.1.3 Determine disposition of result(s) (17486)

Deciding whether to take any additional actions based on the results of quality tests. Initiate a quarantine disposition and relocated inventory, scrap workflow item and scrap transaction, rework operation, net-able and nonnet-able items, and the activity list.

13.3.2.2 Assess results of tests (17487)

Assessing the significance of the sample. Summarize the results of the test. Recommend improvement actions. Decide what steps to take next.

13.3.2.2.1 Assess sample significance (17488)

Assessing the significance of the sample chosen for the test in order to determine whether or not the sample is representative of the larger output or outcome. Determine if the sample meets or does not meet the requirements. Identify the conditions for acceptance, rejection, remediation, and prevention.

13.3.2.2.2 Summarize result(s) (17489)

Outlining the major facts and figures of the quality test results in order to provide insights and information. Use charts, tables, statistical test results, and written findings and conclusions in a summary of results.

13.3.2.2.3 Recommend actions (17490)

Recommending measures for improvement. Assess the summarized results to identify areas which can be improved. Suggest actions to management for improving the quality plan basis on the results of the tests.

13.3.2.2.4 Decide next steps (17491)

Selecting the subsequent actions that the organization can adopt for improving the enterprise quality. Select measures and recommended actions for managing the enterprise quality.

13.3.3 Manage non-conformance (17492)

Handling any nonconformance activities or events. Assess the potential impact of nonconformity. Decide the immediate actions to take. Identify the root causes. Take corrective or preventive action. Ensure future conformance.

13.3.3.1 Assess potential impact (17493)

Analyzing any nonconformance events. Determine the need for corrective and/or preventative action(s). Leverage root-cause analysis, risk exposure, and other evaluations to properly review and approve/reject subsequent actions.

13.3.3.2 Determine immediate action(s) (17494)

Initiating immediate corrective, preventative, or no action based upon the impact and likelihood of reoccurrence. Consider cost/benefit, risk exposure, timing, the assignment of responsibility, and other pertinent factors .

13.3.3.3 Identify root cause(s) (17495)

Recognizing the reasons that have triggered the nonconformance events or activities. Perform a root-cause analysis through documentary evidence and interviews. Involve the appropriate individuals. Leverage cause analysis and risk assessment.

13.3.3.4 Take corrective or preventative action (17496)

Pursuing corrective and preventative activities to eliminate the cause of a detected nonconformity. Define the nonconformity. Communicate and assign responsibility. Identify the appropriate corrective and preventive action. Implement and monitor for reoccurrence.

13.3.3.5 Close non-conformance (17497)

Closing nonconformance. Perform all the final processes related to the nonconformance, including documenting root causes. Document corrective and preventive actions.

13.3.4 Implement and maintain the enterprise quality management system (EQMS) (17498)

Establishing and administering the software that manages content and business processes for quality and compliance across the value chain. Define the quality strategy. Plan and deploy the EQMS scope, targets, and goals. Identify core process controls and metric. Develop EQMS governance. Assess the performance of EQMS. Encourage improvements in EQMS.

13.3.4.1 Define the quality strategy (17499)

Outlining the strategy for managing enterprise quality. Define and formalize quality techniques and standards. Assign responsibilities for achieving the required quality levels. Standardize the quality maintenance procedure, tools and techniques, recording and reporting, the timing of quality maintenance activities, and the roles and responsibilities for the quality management team.

13.3.4.2 Plan and deploy the EQMS scope, targets, and goals (17500)

Establishing and effectively deploying the scope, targets, and goals of EQMS. Define the role of EQMS through nonconformance/corrective and preventive action, compliance/audit management, risk management, failure mode and effects analysis, and statistical process control. Implement EQMS into operational activities. Define the goals and objectives that are to be achieved by the EQMS.

13.3.4.3 Identify core EQMS processes, controls, and metrics (17501)

Recognizing and implementing the processes, controls, and metrics for maintenance of EQMS. Define the role of EQMS in failure mode and effects analysis, complaint handling, and advanced product quality planning. Establish the role of EQMS in evaluating metrics such as cost of quality, overall equipment effectiveness, on-time and complete shipments, percentage of products in compliance, and new product introductions.

13.3.4.4 Develop and document EQMS policies, procedures, standards, and measures (17502)

Setting the process limits. Gather required information. Align with other documents and processes. Define the document structure.

13.3.4.5 Assess the EQMS performance (17503)

Benchmarking current performance in quality metrics that span across the value chain. Identify gaps in performance as compared to industry peers. Identify and implement complementary EQMS capabilities. Enable a continuous improvement environment.

13.3.4.6 Create environment and capability for EQMS improvement(s) (17504)

Rewarding excellence in quality. Create and maintain quality partnerships. Maintain talent capabilities and competencies. Incorporate EQMS messaging into communication channels. Transfer proven EQMS methods. Consider factors such as EQMS reviews and gap assessments and the alignment and compatibility of business processes and quality. Adopt Lean principles.

13.3.4.6.1 Reward quality excellence (17505)

Provisioning rewards for achieving quality excellence. Provide monetary and nonmonetary rewards such as compensation, vacations, gift cards, and reimbursements to employees in recognition of their services, efforts, and achievements in quality excellence.

13.3.4.6.2 Create and maintain quality partnerships (17506)

Establishing and maintaining partnerships with third-party sources to achieve quality excellence. Source and evaluate third-party sources both public and private to ensure that the most effective and efficient partnerships are formed.

13.3.4.6.3 Maintain talent capabilities and competencies (17507)

Maintaining a common denominator for the competency level within the organization's talent circle. Conduct training sessions, skill development activities, and quality excellence activities to ensure that the resources of the organization are competent enough and have the capabilities to achieve the required level of quality.

13.3.4.6.4 Incorporate EQMS messaging into communication channels (17508)

Assimilating all the communication related to the EQMS into the organization's already established communication channels.

13.3.4.6.5 Assure independent EQMS management access to appropriate authority in the organization (17509)

Ensuring EQMS access to the person in charge of the quality management process. Establish who has the authority to manage the EQMS. Ensure access of EQMS to only the person(s) in authority.

13.3.4.6.6 Transfer proven EQMS methods (17510)

Recording and transferring the best practices and proven methods associated with enterprise quality management systems (EQMS) that can be leveraged in improving the organization's framework. Record proven methodologies and approaches with the objective of communicating them for upgrading, refining, and enhancing the organization's systems.

13.4 Manage change (11074)

Planning, designing, and implementing the change. Ensure improvement in the change process.

Suggested KPI

Metric ID	KPI
109742	Total company employee FTEs served per change management/training FTE

13.4.1 Plan for change (21457)

Evaluating impact and planning change activities. Spanning the lifecycle of change from initial concept, to designing, implementing, and sustaining the change, change planning identifies the activities to engage and enable the stakeholders and all impacted by the change. Change plans should address the interplay between people, process, technology, and knowledge to guide the transition, or transformation, from current state to the future state.

13.4.1.1 Determine stakeholders (11140)

Identifying and communicating with shareholders affected by the change. Consider internal and external stakeholders that will be affected by the change. Determine the amount of influence the change will have on them. Ensure the involvement of these stakeholders in the change process by effectively communicating with them.

13.4.1.2 Assess readiness for change (11139)

Determining the level of preparedness of the conditions, attitudes, and resources at all levels in the organization needed for change to happen successfully. Define scope of the proposed change. Select the tools for a change readiness assessment.

13.4.1.3 Identify change champion(s) (11141)

Identifying people exhibit an extraordinary interest in the adoption, implementation, and success of the change. Engage champions in each division or team. Define the roles and responsibilities for the change champions. Determine criteria for selecting change champions. Provide training sessions to champions. Reward and recognize champions.

13.4.1.4 Form design team (11142)

Preparing a design team for implementing change throughout the organization.

13.4.1.5 Define scope (11143)

Defining the extent of the area or subject matter that the change process deals with or to which it is relevant. Establish a set of tools, processes, skills, and principles for managing the people side of change to achieve the required outcomes of the change process.

13.4.1.6 Understand current state (11144)

Using graphical and statistical tools such as pareto diagrams, process flow diagrams, cause-and-effect diagrams, check sheets, histograms, run charts, and scatter diagrams.

13.4.1.7 Define future state (11145)

Determining the state or position that the organization wants to be in after the implementation of the change. Gather necessary information about the processes, structures, and cultures. Define resource requirements.

13.4.1.8 Conduct organizational risk analysis (11146)

Looking beyond the immediate consequences of the threat to a critical asset and placing it in the context of what is important to the organization. Identify the impact of threats to critical assets. Create risk evaluation criteria. Evaluate the impact of threats to critical assets. Incorporate probability into the risk analysis.

13.4.1.9 Assess cultural context (11147)

Evaluating the culture within the organization. Adopt a quantitative, multidimensional measurement approach of an organization's culture and the aspirations for it. Diagnose cultural activities, enhance leadership sections. Integrate cultures.

13.4.1.10 Identify impacted groups (20143)

Recognizing the impact of threats to critical assets. Determine what groups are impacted by this impact.

13.4.1.11 Determine degree/extent of impact (20144)

Evaluating the impact of threats to critical assets. Determine what assets will be impacted by the change.

13.4.1.12 Establish accountability for change management (11148)

Identifying and assigning the people accountable for effective change management. Hold managers accountable for ensuring change happens systematically and rigorously. Ensure that certain behaviors are rewarded or reprimanded accordingly.

13.4.1.13 Identify barriers to change (11149)

Recognizing the circumstances or obstacles that keep the organization from progressing. Identify who and what are the resources resisting change. Identify integration failures, threats by competitive forces, and complexity failures.

13.4.1.14 Determine change enablers (11150)

Identifying the person(s) or thing(s) responsible for making the change possible. Consider factors such as interdependence of efforts, reward to the integrators, sharing of power and responsibility, and employee understanding of why change is essential.

13.4.1.15 Identify resources and develop measures (11151)

Recognizing the resource requirements, and developing measures for change. Identify the financial, material, human, and informational resources needed to successfully implement the change. Develop programs, campaigns, etc. for establishing the change within the organization.

13.4.2 Design the change (11135)

Developing plans for change management, training, communication, and rewards/incentives. Establish metrics for measuring the change adoption. Clarify new roles for employees. Identify budgets.

13.4.2.1 Assess connection to other initiatives (11152)

Correlating the change initiative with the other initiatives. Create an alignment between the goals and objectives of the change process and that of the other initiatives.

13.4.2.2 Develop change management plans (11153)

Creating a detailed structure summary for the purposes of managing the change. Demonstrate the reasons for the change. Define the type and scope of change. Form a change management team. Create a communication plan.

13.4.2.3 Develop training plan (11154)

Creating a detailed summary of all the actions relevant to teaching a person a particular skill or type of behavior. Determine who will deliver the training. Determine when and where the apprentice or trainee needs to go to receive the structured component of the training.

13.4.2.4 Develop communication plan (11155)

Developing a plan for imparting or exchanging information relevant the to change. Define goals, objectives, and audience. Gather tools for all communications.

13.4.2.5 Assign change champion(s) (20145)

Utilizing champions that have been trained to carry out needed changes. Engage champions to communicate roles and responsibilities for the change.

13.4.2.6 Develop rewards/incentives plan (11156)

Creating and designing the plan for rewarding the employees exhibiting the desired behavior. Specify rewards in recognition of service, effort, or achievement regarding the change, including bonuses, compensation, stock options, profit sharing, vacations, and flexible time.

13.4.2.7 Establish change adoption measures (11157)

Establishing a system or standard of measurement for measuring the adoption of the change. Consider activities such as the number of people who have adopted the change, how quickly have they adopted, number of unique adopters, and adopters by teams/divisions.

13.4.2.8 Establish/Clarify new roles (11158)

Establishing and explaining the new roles to employees. Assign roles and responsibilities to resources.

13.4.2.9 Identify budget/roles (11159)

Creating a plan of financial outlay for the newly defined roles. Determine the amount of capital the organization is willing to invest in effectuating these new roles, how would the roles be financed, and what would comprise the ROI from these flows. Coordinate personnel responsible for change management and the finance division.

13.4.3 Implement change (11136)

Effectuating the change within the desired impact areas of the organization. Ensure adequate commitment from all corners of the organization for the desired change. Create support structures. Refashion all processes deemed necessary. Observe the progress.

13.4.3.1 Create commitment for improvement/change (11160)

Kindling an organization wide commitment for effectuating the change. Effectively communicate the advantages of the desired change. Personalize the pitch for change.

13.4.3.2 Reengineer business processes and systems (11161)

Restructuring, redesigning, repurposing, and/or retrofitting existing business processes, activities, and frameworks in order to effectuate the desired change. Review pertinent processes from the ground up by starting with the desired result. (Build on Select a process improvement methodology [11138] to create business processes that perfectly fit with the road map for change.)

13.4.3.3 Support transition to new roles or exit strategies for incumbents (11162)

Supporting the transition of personnel to new roles and the dismissal of any existing employees, necessitated for the desired change. Create an on-boarding process for seamlessly transitioning personnel to new roles. Offer orientation and training. Address any concerns. Create a structured procedure for the discharge of incumbents from their positions.

13.4.3.4 Monitor change (11163)

Monitoring activities in the change process in order to assess the performance of individual agents and the process as a whole. Oversee the implementation of activities needed for effectuating the change. Track the pace, impact, enthusiasm, reaction, and feedback over the change process.

13.4.3.5 Report on change (20146)

Reporting on the outcome of the change. Document changes and the impact those changes had on critical assets. Share findings with those within the target audience: those impacted by the change, change champions, stakeholders, etc.

13.4.4 Sustain improvement (11137)

Sustaining the impact of the change process in order to enact continual process improvement. Monitor the performance of re-engineered business processes. Identify best practices and potential issues. Effectuate remedial steps.

13.4.4.1 Monitor improved process performance (11164)

Monitoring the performance of improved business processes. Track the key performance indicators of the upgraded processes in order to gauge its contribution to the desired change. Expedite through the use of business process management software.

13.4.4.2 Capture and reuse lessons learned from change process (11165)

Documenting and standardizing insights gleaned and the knowledge acquired from studying the change process already implemented. Create case studies/best practices guides from the process of implementing change. Include experienced personnel.

13.4.4.3 Take corrective action as necessary (11166)

Implement corrective action to adjust the re-engineered processes for maximizing the desired impact. Adjust business processes and systems to implement the desired change.

13.5 Develop and manage enterprise-wide knowledge management (KM) capability (11073)

Creating and administering the capability of the organization's knowledge management function. Develop a strategy for knowledge management. Assess capabilities of the knowledge management function.

Suggested KPI

Metric ID	KPI
106105	Number of FTEs that directly support business entity's knowledge management program per \$1 billion revenue
106102	Percentage of business entity employees that participate in approaches and activities included in KM program, initiative, or service
106337	Total cost, excluding overhead cost, for the business entity's knowledge management program per business entity employee
106104	Total cost, excluding overhead cost, for the business entity's knowledge management program per \$1,000 revenue

13.5.1 Develop KM strategy (11095)

Creating a plan for managing the organization's knowledge base. Determine what kind of specialized knowledge the organization possesses, which elements of this collective knowledge can prove beneficial, how to capture and maintain this knowledge, how to grant access to this library of information, and how the organization should proceed.

13.5.1.1 Develop governance model with roles and accountability (11100)

Developing a structure for the governance of the organization's collective knowledge. Gather, maintain, and make accessible the collective knowledge base. Develop a standard procedure for the conservation and perpetuation of the organization's knowledge. Create policies for the usage and maintenance of this knowledge. Establish specialized roles.

13.5.1.2 Define roles and accountability of core group versus operating units (11102)

Clearly determining the roles and responsibilities of all personnel involved in the management of the organization's corpus of knowledge. Flesh out the roles and responsibilities of the KM core group, as well as the operational staff involved in the upkeep of the knowledge management program.

13.5.1.3 Develop funding models (11103)

Analyze the organization's current approach to funding. Learn from the funding approaches of peer organizations. Evaluate the revenue potential and costs of those short-list funding models. Select funding models to implement.

13.5.1.4 Identify links to key initiatives (11104)

Identifying any links that exist between the strategy for knowledge management and any other functional areas. Determine any correlations that exist between the strategic road map for the knowledge management and any other functional areas. Study each function's/unit's attributes.

13.5.1.5 Develop core KM methodologies (11105)

Creating core knowledge management procedures and methodologies. Initiate developing a strategy, planning, execution, and improvement.

13.5.1.6 Assess IT needs and engage IT function (11106)

Determining the IT needs for developing the knowledge management strategy, and collaborating with the IT function to implement the strategy. Assess requirements for technologies such as computer hardware, software, electronics, semiconductors, internet, and telecommunications equipment in order to effectively build and implement the strategy for knowledge management.

13.5.1.7 Develop training and communication plans (11107)

Creating plans for KM training plans and conveying the knowledge management strategy within the organization. Create training programs, sessions, and activities in order to familiarize employees and management with the concept of knowledge management.

13.5.1.8 Develop change management approaches (11108)

Creating approaches for effectively administering the changes in knowledge management. Design an approach that transforms individuals, teams, and the organization to a desired future state represented by the change.

13.5.1.9 Develop strategic measures and indicators (11109)

Establishing measures and indicators for evaluating the performance of the knowledge management function. Define key performance indicators such as the amount of knowledge assets created and number of knowledge projects undertaken.

13.5.2 Assess KM capabilities (11096)

Assessing the maturity of the existing initiatives in knowledge management, and evaluating existing KM approaches. Identify the gaps and needs in order to enhance the existing KM approaches. Develop and implement new KM approaches.

13.5.2.1 Assess maturity of existing KM initiatives (11110)

Evaluating if initiatives are effective or should be discarded. Design a framework for assessing maturity, typically from Level 1 (undefined), Level 2 (repeatable), Level 3 (defined), and Level 4 (managed) through Level 5 (optimized).

13.5.2.2 Evaluate existing KM approaches (11111)

Evaluating existing procedures, policies, and guidelines for knowledge management. Study and examine the organization's approach against industry best practices by benchmarking, competitive analysis, etc.

13.5.2.3 Identify gaps and needs (11112)

Assessing the KM approach evaluations in order to identify any gaps or needs. Compare the performance of the KM approach against the desired or expected performance, as well as against the standard knowledge management industry approach.

13.5.3 Design and implement KM capabilities (20965)

Creating knowledge bases and other repositories to preserve and develop company expertise, and to train new employees.

13.5.3.1 Develop new KM approaches (11114)

Designing new policies, procedures, and guidelines to support knowledge management.

13.5.3.2 Design resource model for KM approaches (20966)

Creating a model to describe resources and approaches to organization's knowledge management. Establish standards and guidelines to be followed.

13.5.3.3 Implement new KM approaches (11115)

Implementing new policies, procedures, and guidelines to support knowledge management.

13.5.3.4 Leverage and enhance IT for KM approaches (20967)

Using existing technologies to improve an organization's knowledge management processes. Research available third-party offerings. Develop proprietary solutions. Employ knowledge engineers, data scientists and other relevant personnel.

13.5.3.5 Develop measures (20968)

Creating metrics that can be used to systematically describe KM approaches and capabilities. Choose applicable scales, benchmarks and units of measure. Determine required precision and error rates.

13.5.4 Evolve and sustain KM capabilities (20969)

Developing resources for improved knowledge management and knowledge engineering.

Suggested KPIs

Metric ID	KPI
106115	Number of business entity employees that participate in approaches and activities included in KM program, initiative, or service per \$1 billion revenue
108890	Percentage change in cost savings attributed to KM
108892	Percentage change in cycle time reduction for projects/processes attributed to KM
108891	Percentage change in time savings attributed to KM

13.5.4.1 Enhance/Modify existing KM approaches (11113)

Leveraging KM evaluations and identified gap to enhance existing approaches.

13.5.4.2 Sustain awareness and engagement (20970)

Developing awareness about available knowledge bases and promoting their use to maximize their impact.

13.5.4.3 Expand KM infrastructure to meet demand (20971)

Augmenting available resources to better leverage the offerings of the organization to serve existing clients and to expand the client base.

13.6 Manage Content (21646)

Storing, managing, curating and delivering enterprise content and knowledge assets to enable consistent reuse and informed decision making. Establish structures and governance that support classification, semantic enrichment, and lifecycle management of content across formats and repositories. This includes all forms of emerging technologies such as artificial intelligence (AI), machine learning assisted tagging, automated classification, and semantic content processing.

13.6.1 Define content management strategy (21647)

Establishing a foundational plan that guides how an organization manages its content through the content lifecycle. Outlining the strategy for organizing, delivering, and facilitating access to enterprise content.

13.6.1.1 Establish content management objectives (21648)

Establishing objectives for content management that enhance the organization and accessibility of enterprise content. Objectives can include curation, findability, consistency, user-centric design, lifecycle management, governance and roles, quality assurance, and measurement and evaluation.

13.6.1.2 Develop content management governance model (21649)

Establishing a structured framework with roles and responsibilities to oversee and guide content management practices within an organization to ensure content is managed consistently, remains high-quality, meets the needs of users, and enhances the overall content management strategy.

13.6.1.3 Develop content management funding models (21650)

Defining funding approaches for content management activities, capabilities, and infrastructure to support sustainable operations, investment prioritization, and alignment with organizational objectives.

13.6.1.4 Develop core content management methodologies (21651)

Identifying and implementing content management methodologies to effectively store, deliver, and facilitate access to enterprise content. Core methodologies may include prioritization of critical or high-value content, findability to ensure ease of locating relevant content, content lifecycle management, standardization of content creation, review and access, collaboration, and technology integration.

13.6.1.5 Assess content management IT needs and engage IT function (21652)

Assessing technology requirements for content management and collaborating with the IT function to align systems, integration, security, and support with content management needs. This includes leveraging all forms of new and evolving technology such as artificial intelligence (AI).

13.6.1.6 Develop content management training and communication plans (21653)

Developing training, change and communication plans to support the organization's content management practices. Define target audiences, required competencies, learning objectives, and delivery methods to ensure consistent understanding and adoption of content standards, tools, and workflows. Create communication strategies to promote awareness of content governance, reinforce expectations, and inform stakeholders of process updates, system changes, and best practices. Coordinate with internal partners to design training materials, schedule learning sessions, and disseminate communications that enable effective and compliant content creation, storage, use, and lifecycle management. Monitor participation, evaluate effectiveness, and continuously improve based on feedback and evolving organizational needs.

13.6.1.7 Develop strategic measures and indicators for content management (21655)

Defining and implementing performance measures to assess the effectiveness and strategic value of content management practices. Align indicators with organizational goals, governance requirements, and user needs. Specify data sources, measurement methods, and reporting cadences to provide reliable insight into content quality, accessibility, utilization, and lifecycle compliance. Collaborate with stakeholders to validate metric definitions, integrate measures into dashboards, and set expectations for monitoring and improvement. Periodically review and refine measures in response to changing priorities and requirements.

13.6.1.8 Manage content intelligence and insights (21711)

Monitor and analyze content ecosystem performance to understand search behavior, user intent, knowledge gaps, content effectiveness, and content lifecycle health. Use content usage patterns and derived insights to identify emerging needs, anticipate gaps, recommend updates or new content, and continuously optimize the relevance, quality, and accessibility of the content ecosystem. This includes leveraging all forms of new and evolving technology such as artificial intelligence (AI)

13.6.2 Develop and manage taxonomies (21656)

Developing and managing taxonomies, ontologies, and related semantic structures to classify, enrich, and relate enterprise content and knowledge assets, supporting consistent interpretation, discoverability, reuse, and advanced capabilities such as automated classification and semantic processing.

13.6.2.1 Determine content management requirements (21657)

Identifying functional, operational, governance, and compliance requirements that content management practices and solutions must satisfy across the organization.

13.6.2.2 Define content taxonomies (21658)

Establishing content metadata structures that function as a common classification language by defining hierarchical categories and attributes used to organize and relate content, ensuring consistency across formats, business areas, and locations and supporting discoverability and semantic enrichment.

13.6.2.3 Define file naming standards and tagging requirements (21659)

Defining standardized conventions for naming, versioning, and tagging digital files and content assets to support consistency, findability, and compliance across the organization. Establish required metadata elements and tagging structures aligned with enterprise taxonomies, information architecture, and regulatory or operational needs.

13.6.3 Define content systems of record and storage requirements (21660)

Defining requirements for systems of record and storage locations to ensure content is securely stored, retrievable, retained appropriately, and aligned with governance and compliance needs.

13.6.3.1 Define content access controls (21661)

Defining rules and permissions that govern who can create, view, modify, and distribute content to protect sensitive information and support appropriate access.

13.6.3.2 Develop content audit and retention requirements (21662)

Establishing audit and retention requirements to ensure content is reviewed, retained, archived, or disposed of in accordance with governance, legal, and operational obligations.

13.6.4 Manage content infrastructure (21663)

Managing the systems, tools, and repositories that support content storage, access, administration, and control across the content lifecycle. Consider AI supported content services (e.g., auto classification, semantic enrichment, embeddings stores, and knowledge graph infrastructure).

13.6.4.1 Set up and maintain systems of record and storage locations (21664)

Establishing and maintaining content repositories and systems of record to support secure storage, organization, access, and lifecycle management.

13.6.4.2 Implement and execute content administration responsibilities (21665)

Executing administrative activities required to manage content systems, permissions, structures, and configurations in accordance with defined standards and governance.

13.6.4.3 Audit content compliance (21666)

Overseeing activities to verify that content complies with established standards, policies, and requirements across its lifecycle.

13.6.4.4 Plan content audits (21667)

Planning content audits by defining scope, criteria, timing, and responsibilities to assess compliance and effectiveness of content management practices.

13.6.4.5 Perform content audits (21668)

Conducting reviews of content to evaluate compliance with defined standards, controls, and retention requirements. Includes auditing for semantic accuracy, metadata completeness, and AI-readiness. Consider leveraging all forms of new and evolving technology such as artificial intelligence (AI).

13.6.4.6 Track content non-compliance resolution (21669)

Tracking identified content non-compliance issues and monitoring corrective actions to ensure timely resolution and adherence to content standards.

13.6.5 Develop and manage content (21670)

Creating, acquiring, refining, and maintaining content to ensure it is accurate, relevant, consistent, and aligned with organizational standards and intended use. This includes leveraging all forms of new and evolving technology such as artificial intelligence (AI). Apply metadata, tags, and semantic relationships to improve findability, compliance, and reuse.

13.6.5.1 Identify new and existing content (21671)

Identifying content needs and existing content assets to support reuse, updates, and alignment with organizational requirements.

13.6.5.2 Identify content control requirements (21672)

Identifying control requirements for content, including review, approval, access, and compliance needs across the content lifecycle.

13.6.5.3 Prepare created content (21673)

Preparing newly created content for use by applying required standards, structure, and controls prior to review and approval.

13.6.5.4 Prepare acquired content (21674)

Preparing externally sourced or acquired content for organizational use by validating quality, applying standards, and aligning it with governance requirements.

13.6.5.5 Refine content (21675)

Refining content to improve clarity, accuracy, consistency, and quality for its existing intended purpose and audience. This includes leveraging all forms of new and evolving technology such as artificial intelligence (AI).

13.6.5.6 Enhance and adapt content (21676)

Enhancing and adapting content to support new or different audiences, formats, channels, or contexts while preserving core meaning and intent of the original content. This includes leveraging all forms of new and evolving technology such as artificial intelligence (AI).

13.6.5.7 Perform content branding (21677)

Applying branding elements and standards to content to ensure consistent identity, presentation, and alignment with organizational guidelines.

13.6.5.8 Execute technical edits on content (21678)

Performing technical edits to ensure content meets formatting, accessibility, usability, and technical quality requirements. This includes leveraging all forms of new and evolving technology such as artificial intelligence (AI).

13.6.6 Deliver approved content (21679)

Delivering approved content to intended audiences through appropriate channels, repositories, or platforms in accordance with defined standards and controls.

13.6.6.1 Assess and approve content (21680)

Reviewing content to confirm accuracy, quality, compliance, and readiness prior to approval for distribution or use.

13.6.6.2 Publish approved content (21681)

Publishing approved content to designated locations or channels to make it available to intended users.

13.6.6.3 Store approved content (21682)

Storing approved content in designated repositories to support controlled access, retrieval, and lifecycle management.

13.6.7 Control delivered content (21683)

Controlling the use, evaluation, retention, and disposition of delivered content to ensure continued relevance, compliance, and value over time. Includes monitoring content quality and semantic coherence.

13.6.7.1 Evaluate content (21686)

Evaluating content usage, effectiveness, and relevance to inform updates, improvements, or retirement decisions.

13.6.7.2 Archive content (21687)

Archiving content that is no longer actively used but must be retained to meet governance, legal, or historical requirements.

13.6.7.3 Delete content (21688)

Deleting content that has reached the end of its retention period and is no longer required, in accordance with defined policies and controls.

13.7 Measure and benchmark (21584)

Defining and managing measurement and benchmarking. Measure and benchmark the performance of internal processes, as well as the organization as a whole.

13.7.1 Define and manage organizational performance strategy (21585)

Creating and implementing a strategy for managing organizational performance. The strategy should include approaches for measuring, tracking, streamlining, and improving internal performance. It encompasses a blueprint for the tactical measurement of internal processes and work force improvement, in alignment with Employee Metrics Developed and Managed [10526].

13.7.1.1 Define enterprise measurement models (11075)

Developing a model for the organization's management systems. Develop a high-level measurement system to track performance across the enterprise or in specific functions or business units. Determine which processes to measure, which measures to use, how often to measure, and measurement targets. Review strategic decisions about how to best measure an organization.

13.7.1.2 Maintain enterprise measurement models (21586)

Reviewing, evaluating, and updating enterprise measurement models. Align measurement models to current and future goals and performance targets and make adjustments to support visibility and reporting needs across the organization.

13.7.2 Benchmark performance (11072)

Comparing organizational performance internally or externally with other organizations.

13.7.2.1 Conduct performance assessments (11083)

Measuring, researching, and recording the performance of people, processes, mechanisms, or other areas of the business that the organization wants to benchmark or track.

13.7.2.2 Develop benchmarking capabilities (11084)

Improving an organization's ability to compare its performance internally or externally and maintaining benchmarking relationships with other organizations. Train staff in benchmarking. Develop technological solutions or other materials to aid benchmarking efforts. Consult with external entities to gain knowledge or tools to help benchmark.

13.7.2.3 Conduct internal and external benchmarking (11085)

Benchmarking internal processes and against external competitors.

13.7.2.4 Conduct gap analysis (11087)

Examining performance against benchmarked organizations or entities. Determine how much performance needs to change to meet expectations. Reach strategic goals.

13.7.2.5 Establish need for change (11088)

Establishing a need for changing the performance of the organization. Make use of the gap analysis results in order to define the need for change.

13.7.3 Evaluate performance (20147)

Assessing process data, measures, and trends in an effort to evaluate process performance and identify possible improvements.

13.7.3.1 Establish performance indicators (measures) (10270)

Designing key measures that analyze and interpret how effectively the business is achieving its objectives.

13.7.3.2 Establish monitoring frequency (10271)

Deciding on the appropriate amount of supervisions that are needed to effectively assess the performance of business plans.

13.7.3.3 Collect performance data (20148)

Consolidating acquired metrics and trends. Provide data that can be benchmarked against historical data.

13.7.3.4 Calculate performance measures (10272)

Measuring the performance of process planning. Quantify the performance, record results of the performance tests, and report them to the appropriate authority.

13.7.3.5 Identify performance trends (10273)

Recognizing the trends in performance. Carefully and strategically assess the results in order to effectively spot the trends.

13.7.3.6 Analyze performance (10274)

Evaluating the gaps between achieved and benchmarked performance. Analyze how performance differs from the optimal or expected performance.

13.7.3.7 Prepare performance reports (10275)

Creating reports that systematically record and represent the performance planning. Construct a detailed report specifying the performance, and include indicators such as the performance gaps, performance trends, and analysis.

13.7.3.8 Develop performance improvement plan (10276)

Using performance indicators to report, analyze, and create a detailed performance improvement plan to bridge the performance gaps.

13.8 Develop, manage, and deliver analytics (20959)

Creating new and improving existing analytical capabilities to enhance data management pipeline.

13.8.1 Identify needs from stakeholders (21459)

Gathering information from stakeholders prior to conducting analytics.

13.8.2 Scope analytics project (21460)

Determining the size and scale of the project based upon the collected information and analytics.

13.8.3 Develop and manage hypotheses (20960)

Creating theories that explain empirical data. Use the hypotheses to guide feature selection in the process of data collection.

13.8.4 Collect data (20961)

Gathering and harvesting structured and unstructured data from disparate sources. Clean and pre-process data. Remove duplicates. Convert to a uniform format to make records comparable.

13.8.5 Prepare data (21461)

Creation and validation of data in order to initiate the process of analysis.

13.8.6 Analyze data (20962)

Conducting data analysis. Choose statistical algorithms that best reveal patterns and trends in the data. Compare with hypotheses and time series forecasts. Determine error rates and significant outliers.

13.8.7 Create data models (21462)

Creation of conceptual and physical data models as an outline for data structure and storage.

13.8.8 Review data models with stakeholders (21463)

Confirm data models represent the hypothesis supporting the original research question

13.8.9 Refine data models (21464)

Make required changes to data model based upon review with stakeholders.

13.8.10 Report on analysis (20963)

Summarizing and documenting the results of data analysis. Create graphs and visualizations to illustrate numerical findings to make them more accessible to readers.

13.8.11 Identify remedial actions (20964)

Determining the steps that need to be taken to correct the shortcomings.

13.9 Manage environmental health and safety (EHS) (11179)

Determining the impacts of environmental health and safety. Create and implement the EHS program. Train and educate employees of the EHS function. Oversee and manage the EHS program.

13.9.1 Determine environmental health and safety impacts (11180)

Determining the impact of EHS offering--and the procedures it employs to process them--on the environment at large, as well as the health and safety of employees. Evaluate the environmental impact of the organization's products, services, and operations. Conduct health, safety, and environmental audits.

13.9.1.1 Evaluate environmental impact of products, services, and operations (11186)

Evaluating the impact of offerings and the auxiliary operations required to process them on the immediate ecosystem and the environment at large. Study the lifecycle of the products/services offered by the organization. Estimate any affect on the environment through metrics such as a calculation of carbon footprint.

13.9.1.2 Conduct health and safety and environmental audits (11187)

Conducting an inspection to verify that the organization adequately complies with the environmental, health, and safety standards. Audit procedures and records regarding responsibility for the environment, health, and safety.

13.9.2 Develop EHS program (11181)

Identify the requirements for regulation and shareholders. Assess future risks and opportunities. Develop a policy for the EHS program. Record and manage EHS program events.

13.9.2.1 Identify regulatory and stakeholder requirements (11188)

Determining any protocols or standards to comply with, set by regulatory agencies or the organization's stakeholders. Closely examine all standards and matters of compliance relating to the environment, health, and safety.

13.9.2.2 Assess future risks and opportunities (11189)

Evaluating any risks and opportunities that might affect the environmental, health, and safety of products/services. Leverage techniques such as cost-benefit analysis, trend extrapolation, systems analysis, social surveys, historical surveys, historical analogy, Delphi, conferences, workshops, briefings, hearings, advisory committees, moot courts, artistic judgment, on-site field investigation, scaling techniques, and scenario creation.

13.9.2.3 Create EHS policy (11190)

Creating a plan for managing the environmental, health, and safety impact of products/services. Establish minimum requirements for the organization regarding the environment at large and the health and safety of employees. Develop policies, written procedures, and supporting tools to dictate how the organization will meet policy requirements.

13.9.2.4 Record and manage EHS events (11191)

Recording and managing all events and activities associated with complying with environmental, health and safety standards. Create event calendars. Assign funds. Educate employees. Conduct events.

13.9.3 Monitor and manage EHS program (21587)

Managing the performance, costs and benefits of EHS. Measure and report the performance of EHS. Implement plans for emergency response and pollution prevention. Train and educate employees. Provide EHS support.

13.9.3.1 Manage EHS costs and benefits (11193)

Administering the costs and benefits of EHS management program. Evaluate program costs to ensure that the benefits of the program always outweigh its costs.

13.9.3.2 Measure and report EHS performance (11194)

Using performance techniques and indicators. Utilize number of audits or inspections performed, safety committee meetings, the number and types of findings and observations, timely preventive maintenance tasks performed, etc.

13.9.3.3 Implement emergency response program (11196)

Implementing a program for organizing, coordinating, and directing available resources to respond to the event. Conduct a risk assessment to identify potential emergency scenarios in order to create a program that ensures that resources are on hand--or quickly available--in case of emergencies.

13.9.3.4 Implement pollution prevention program (11197)

Implementing a program that reduces or eliminates the creation of pollutants through increased efficiency in the use of raw materials, energy, water, or other resources. Implement a program to inspect facilities that store, manufacture, or use hazardous, toxic, or polluting materials.

13.9.3.5 Train and educate functional employees (11182)

Conducting programs such as on-the-job training sessions, group training workshops, and online training.

13.9.3.6 Provide EHS support (11195)

Supporting employees in light of the organization's environmental, health, and safety policies and standards. Provide medical insurance, maternity leave, environmental education, training over safety, etc.

13.10 Manage sustainability (21588)

Developing and managing sustainability practices for the organization. Ensure proper understanding and communication of ESG standards, requirements, capabilities, and future trends. Promote awareness, alignment, and continuity.

13.10.1 Develop sustainability capability (21589)

Developing sustainability (ESG) capabilities for the organization. Understand and communicate legal, regulatory, and social/environmental requirements. Establish policies, objectives, guidelines and approaches for ESG efforts and reporting.

13.10.1.1 Identify sustainability requirements (21590)

Identifying, documenting, and communicating sustainability requirements. Closely examine all standards and matters of compliance relating to ESG. Determine protocols or standards to comply with, set by regulatory agencies or the organizations stakeholders.

13.10.1.1.1 Define sustainability disclosure requirements (21591)

Defining and communicating sustainability disclosure requirements. Clarify and align disclosure requirements to other organizational reporting requirements and needs. Integrate preparation and reporting activities.

13.10.1.1.2 Define sustainability governance requirements (21592)

Defining governance requirements for sustainability. Include structure, roles, alignment to organization models, processes and standards to be applied.

13.10.1.1.3 Define sustainability functional and performance requirements (21593)

Defining functional and performance requirements for sustainability. Align with ESG strategies, goals, and the implementation of sustainability efforts across the organization, provide a roadmap and visibility to shared and collective requirements.

13.10.1.2 Establish sustainability goals/objectives (21594)

Establishing organizational sustainability goals/objectives. Gather, align, and promote organization-wide sustainability goals that collectively address the overall sustainability requirements. Ensure the goals are measurable and have qualitative and quantitative targets.

13.10.1.3 Create sustainability policies (21595)

Establishing, documenting, and communicating sustainability policies. Develop policies, written procedures, and supporting tools to dictate how the organization will meet policy requirements.

13.10.1.4 Define sustainability measures (21596)

Defining sustainability measures. Provide organization-wide measures, to include data collection strategies, calculations, analytics, and reporting formats.

13.10.1.5 Create sustainability plan(s) (21597)

Creating sustainability plans. Develop and socialize sustainability plans for the organization, functional units, and support services. Ensure alignment to sustainability requirements, goals, and governance.

13.10.2 Manage sustainability capability (21598)

Managing sustainability across the organization. Provide training, support, reporting, and oversight to the distributed sustainability efforts across functional units and support services.

13.10.2.1 Provide sustainability training (21599)

Providing sustainability training and awareness. Plan, prepare, and oversee delivery of sustainability education and enablement activities.

13.10.2.2 Provide sustainability support (21600)

Providing support for sustainability activities. Augment functional units and support teams with coaching, mentoring, and SME capacity to perform sustainability projects and activities.

13.10.2.3 Perform sustainability reporting (21601)

Conducting and supporting sustainability reporting. Collect, analyze, and report sustainability performance to requirements. Align reporting across functional units and support teams.

13.10.2.3.1 Measure sustainability performance (21602)

Measuring sustainability performance. Setup, collect, and validate sustainability data. Conduct audits and inspections. Evaluate results to requirements and targets. Identify and track resolution of gaps and variances.

13.10.2.3.2 Prepare sustainability statements (21603)

Preparing sustainability statements. Given the multitude of potential audiences for reporting, alignment and consistency of sustainability statements provides clarity and reusability for those audiences.

About APQC's Process Classification Framework (PCF)[®]

The Framework for Process Improvement

Experience shows that the potential of benchmarking to drive dramatic improvement lies squarely in making out-of-the-box comparisons and searching for insights not typically found within intra-industry paradigms. To enable this beneficial benchmarking, the PCF serves as a high-level, industry-neutral enterprise process model that allows organizations to see their business processes from a cross-industry viewpoint.

The PCF enables organizations to understand their inner workings from a horizontal process perspective, rather than a vertical functional viewpoint. The PCF does not list all processes within a specific organization, and every process listed in the framework is not present in every organization.

Originally created in 1992 by APQC and a group of members, the framework has experienced more than twenty years of creative use by thousands of organizations worldwide. The PCF is supported by APQC's Open Standards Benchmarking research. It is continuously enhanced as APQC's Open Standards Benchmarking team further develops definitions, processes, and measures. Please visit APQC's web site periodically for updates. The PCF is available for organizations of all industries and sizes at no charge by visiting <http://www.apqc.org/pcf>.

The Process Classification Framework is the copyrighted intellectual property of APQC. APQC encourages the wide distribution, discussion, and use of the PCF for classifying and defining organizational processes. Accordingly, APQC hereby grants you a perpetual, worldwide, royalty-free license to use, copy, publish, modify, and create derivative works of the PCF, provided that all copies of the PCF and any derivative works contain the following attribution:

APQC's Process Classification Framework[®] (PCF) is an open standard developed by APQC, a nonprofit that promotes benchmarking and best practices worldwide. The PCF is intended to facilitate organizational improvement through process management and benchmarking, regardless of industry, size, or geography. To download the full PCF or industry-specific versions of the PCF, as well as associated measures and benchmarking, please visit www.apqc.org/pcf.

About APQC

APQC (American Productivity & Quality Center) is the world's foremost authority in benchmarking, best practices, process and performance improvement, and knowledge management (KM). With more than 1,000 member organizations worldwide, APQC provides the information, data, and insights organizations need to support decision-making and develop internal skills. [Learn more.](#)
